

221 Martindale Ave Liberty Hill Texas 78642
Cell: (602) 549-2825 Email: allan.gagnon@gmail.com

Experienced Solutions Architect / Technical Sales Engineer:

With over two decades of experience in the field, I have honed my skills in prototyping, inventing, selling, and evangelizing a wide range of product lines. My expertise spans various industries, including industrial manufacturing, robotics, IoT, and cloud infrastructure.

During my tenure at Norcimbus Inc, I successfully introduced and promoted cutting-edge solutions such as industrial high purity gas delivery systems, industrial gas blending units, bulk chemical delivery systems, and industrial robotic wafer handling systems. As a technical account manager, I effectively catered to the needs of numerous clients in the realms of IoT/Robotics and cloud infrastructure. I adeptly managed a diverse portfolio of accounts while maintaining a strong focus on customer satisfaction.

My ability to implement large-scale processes and systems, coupled with my knack for managing complex customer relationships, has enabled me to secure contracts with prestigious companies including BOC Gases, Intel, TSMC, Motorola, Cree, and many others. Throughout the pre- and post-sales phases, I have consistently delivered results-driven solutions as a solutions architect and sales engineer.

Furthermore, I possess extensive experience in agriculture evangelism and the prototyping of industrial solutions such as pumping stations, industrial robotics, vehicle safety/maintenance, vehicle automation, industrial irrigation control unit automation, and IoT connectivity. Working closely with clients of Valmont Industries, including Lenzie Ranch, Navajo Nation, Tyson Foods, and ConAgra, I have successfully developed and delivered tailored technological solutions to meet their specific needs.

In addition to my achievements at Norcimbus, I have also served as a seasoned solutions architect at Lockheed Martin, where I focused on the prototyping of industrial missile control centers and industrial nitrogen control systems. As a versatile professional, I thrive in developing and maintaining strong customer connections while bridging the gap between technology and business requirements. My commitment to delivering optimal solutions aligned with clients' goals has been a hallmark of my career.

Amazon Web Services (AWS): Throughout my illustrious tenure as an IoT specialist and robotics architect at AWS, I have diligently cultivated an unparalleled wealth of expertise in meticulously crafting intricate and flawlessly integrated systems. Through close collaboration with esteemed industry leaders, I have spearheaded the conceptualization, development, and deployment of revolutionary IoT and robotics solutions that have completely transformed business operations and significantly enhanced the quality of life for individuals. I possess comprehensive expertise that spans the entirety of architecture design, integration, and deployment of enterprise-level solutions. I possess an unparalleled grasp of cutting-edge technologies, encompassing cloud computing, mobile applications, analytics, artificial intelligence (AI), and cybersecurity. This profound knowledge empowers me to spearhead the delivery of groundbreaking and impregnable solutions that cater to the ever-evolving demands of businesses.

Education

- Graduated on Oct. 3rd, 2011, with Master's Program Information System
- Graduated on Feb 2007 from DeVry University with a Bachelor of Science in Technical Management
- Completed Interface Technical Training Web Development using ASP.NET 2.0: 5 Day Instructor-Led Workshop
- Completed Interface Technical Training on Advanced C# Programming: 5 Day Instructor-Led Workshop

Professional Experience:
CTO / IoT Solutions Architect / Sales Engineer
AI4HK LLC.

Jan 2024 – Present

Austin, TX

As the Chief Technology Officer (CTO) I play a pivotal role in steering the company towards its strategic vision by overseeing the integration of cutting-edge technologies into its solutions. I manage a multidisciplinary team of engineers and developers, fostering a culture of innovation and collaboration. By staying abreast of industry trends and technological advancements, I ensure that AI4HK remains competitive and agile in the rapidly evolving landscape of IoT and cloud services.

Solutions Architect / Sales Engineer
Arduino

May 2023 – Jan 2024
Austin, TX

As a Solutions Architect at Arduino, I have the privilege of working closely with customers to facilitate the seamless integration and interaction of hardware components with cloud computing in the ever-evolving realm of IoT. My role involves executing and resolving various IoT projects and challenges for a wide range of clients. By leveraging my expertise, I provide comprehensive support to ensure the successful convergence of hardware, cloud computing, and IoT, while adhering to optimal standards and practices. At Arduino, I am committed to driving innovation and delivering impactful solutions that empower our customers to harness the full potential of IoT technology.

Senior AMER IoT Specialist SA
Amazon Web Services

April 2022 – April 2023
Austin, TX

During my tenure as a Senior IoT Specialist at Amazon Web Services, I worked closely with customers to bridge the gap between cloud computing and IoT. By understanding their unique requirements, I helped them unlock the transformative power of these technologies. I successfully implemented and resolved numerous IoT projects for clients across various industries, providing them with comprehensive support and ensuring adherence to industry best practices. Additionally, I actively participated in collaborative sessions, brainstorming solutions to overcome challenges and drive the development of cutting-edge robotics projects and IoT solutions. My role at Amazon Web Services allowed me to play a key role in shaping the future of IoT and contribute to the advancement of technology-driven innovation.

Senior Architect / Sales Engineer
Amazon Web Services

February 2022 – April 2022
Austin, TX

During my tenure as a Senior Robotics Architect at Amazon Web Services, I played a vital role in driving innovation and shaping the future of robotics technology. Additionally, I engaged in interactive sales activities, effectively showcasing and prototyping customer-centric technical solutions in the fields of agriculture and vehicle automation. By utilizing IoT RoboRunner, RoboMaker, and other IoT solutions, I helped customers envision and implement cutting-edge solutions tailored to their needs. Furthermore, I played a key role in creating and executing Proof of Concepts (POCs) on AWS cloud solutions, enabling customers to explore and adopt robotics and IoT technologies with confidence. My role also encompassed prototyping, evangelization, and design of POCs, where I leveraged Linux systems, robotic fleets, IoT Greengrass, and vendor fleet manager gateways to create robust and scalable solutions. Through my contributions at Amazon Web Services, I strived to push the boundaries of robotics technology and empower customers to realize the full potential of robotics and IoT in their respective industries.

Professional Services / Sales Engineer
Amazon Web Services

March 2020 – February 2022
Austin, TX

As an IoT Edge / Robotics Architect at Amazon Web Services, I actively contributed to the advancement of Robotics and IoT technologies, while providing exceptional support to customers.

At re:Invent 2019, I had the opportunity to engage with existing and potential customers, collaborating on the prototyping and interaction of the Robotics Lair. This experience provided valuable insights into the intricacies of Robotics, IoT, Linux, and other AWS solutions.

I also played a pivotal role in establishing the Technical Field Community for Robotics at AWS, fostering a culture of knowledge sharing and collaboration among professionals in the field. This initiative aimed to enhance the collective expertise and drive innovation within the Robotics domain.

Furthermore, I proactively identified and evangelized customer-centric opportunities in the realm of Robotics and IoT, aligning them with the comprehensive offerings of AWS Professional Services. By understanding customers' unique requirements, I helped them leverage the power of AWS to achieve their business objectives.

I actively assisted customers in the implementation of Robotics and RoboMaker solutions, ensuring the successful validation of Proof of Concept (POC) concepts. This involved providing hands-on support and guidance throughout the process.

Moreover, I collaborated closely with customers, working together to develop and implement multiple POCs. By leveraging an IoT Edge strategy, we created innovative solutions tailored to their specific needs, enabling them to unlock the full potential of Robotics and IoT technologies.

Through my contributions at Amazon Web Services, I strived to empower customers with the tools and expertise needed to drive transformative change in the Robotics and IoT landscape.

Senior Technical Account Manager
Amazon Web Services

April 2019 – March 2020
Austin, TX

As a Senior Technical Account Manager at Amazon Web Services, my primary focus was ensuring customer satisfaction and driving their success through the adoption of groundbreaking AWS Cloud technologies.

I harnessed the power of these cutting-edge technologies to enhance customer operations and improve their overall performance. By staying up to date with the latest advancements in AWS Cloud, I continuously expanded my expertise to better serve customers.

In my role, I had the privilege of interacting with C-suite customers, building strong relationships, and collaborating with leading technologists from around the world. These interactions allowed me to understand their unique requirements, provide tailored solutions, and deliver exceptional service.

Additionally, I actively participated as a core team member in the Technical Field Community dedicated to Robotics at AWS. This involvement enabled me to contribute to knowledge sharing, collaborate with experts, and foster a sense of community within the field.

I successfully resolved critical and highly complex customer issues by leveraging the wide range of AWS Services available. This required deep technical expertise and effective problem-solving skills to address and overcome challenges.

To further enhance my competence, I acquired various AWS certifications, demonstrating my proficiency in different AWS services. Moreover, I actively participated in training initiatives, sharing my knowledge and expertise to empower others with the skills needed to leverage AWS services effectively.

Through my role at Amazon Web Services, I aimed to provide exceptional service, drive customer success, and enable organizations to harness the full potential of AWS Cloud technologies.

Senior Advanced Technology Engineer
Valmont Industries

(Rehire) April 2010 – March 2019
Valley, NE

As a Senior Advanced Technology Engineer at Valmont Industries, I played a pivotal role in spearheading technological innovation and advancing Precision Agriculture by incorporating Azure IoT, Kubernetes, and Docker.

I successfully developed a Spatial Analysis application using R Studio and Python, harnessing the power of machine learning and artificial intelligence techniques to drive insights and advancements in Precision Agriculture. This application significantly contributed to optimizing and streamlining agricultural processes.

Furthermore, I led the implementation of a Micro-services architectural design, leveraging Azure Service Fabric, Azure Cosmos DB, Azure Functions, and container services. This modernized approach not only enhanced the scalability and flexibility of the system architecture but also improved overall performance.

To enable efficient control over pumping operations, I designed and created an IoT pumping controller that utilized Azure IoT, Kubernetes, and Docker. This solution provided both local and remote-control capabilities, resulting in enhanced efficiency and control.

In addition, I developed and deployed an OData V4 Endpoint, seamlessly integrating with Salesforce, while employing Docker for a comprehensive CI/CD pipeline. This integration facilitated smooth data exchange and streamlined processes within the organization.

To ensure efficient and reliable communication across the network, I established and managed a Cellular Network Operations Center (NOC). This center played a crucial role in enabling remote communication and management.

Moreover, I set up and managed an IoT Hardware and Software Operation Center, serving as a centralized hub for monitoring and managing IoT devices and solutions.

To enhance system functionality, I implemented a Pure JavaScript RESTful API and corporate interpreter using Node.js, JavaScript, and Express.js. This implementation fostered seamless communication and integration between systems and applications, thereby improving overall efficiency.

Throughout my tenure at Valmont Industries, my primary focus was on driving technological advancements and delivering innovative solutions to propel the company forward in the realm of advanced technology and Precision Agriculture, leveraging the capabilities of Azure IoT, Kubernetes, and Docker.

Senior Programmer

September 2015 – January 2017

Medefis

Omaha, NE

During my time as a Senior Programmer at Medefis, I played a crucial role in ensuring smooth data migration, enhancing user experience, and developing a cutting-edge web application.

I led the development of a SSIS package that facilitated the seamless transfer of data from the old system to the new system. This involved careful planning, data mapping, and validation to ensure data integrity and accuracy throughout the migration process.

Furthermore, I collaborated with consultants to architect and implement Angular.js development. By leveraging the capabilities of Angular.js, we were able to create interactive and dynamic user interfaces, enhancing the overall user experience of the web applications.

In addition, I took the lead in designing and developing the next-generation web application using MVC5. This involved incorporating robust security measures with ThinkTecture Identity Server 3 to ensure data protection and user authentication. I also implemented Data Repository, Business Repository, Business Rules Engine, and API components to create a comprehensive and scalable web application.

Through these efforts, I contributed to the successful modernization of Medefis' systems, ensuring smooth data migration, enhancing user experience, and delivering a cutting-edge web application that met the organization's needs.

Manager Consultant
Sogeti Project at Berkley Technology Services /

November 2013 – May 2014
Omaha, NE

As a Manager Consultant, I played a critical role in the successful execution of projects at Sogeti, working with Berkley Technology Services and FBL Financial Group, Inc.

During this period, I architected and implemented Restful services for changing and resetting passwords against Active Directory. This involved designing the service architecture, implementing secure authentication mechanisms, and ensuring seamless interaction with the Active Directory infrastructure.

I developed and implemented Principal Context Domain functionality for Restful Services, providing robust and secure access to domain-specific resources.

Moreover, I created login and change password forms using MVC5 and Bootstrap 3, delivering intuitive and user-friendly interfaces for authentication and password management.

In addition, I undertook the task of redesigning the MS ADFS Proxy page. This involved removing the existing HTML and CSS and implementing the Bootstrap 3 Grid System to improve the page's responsiveness and overall user experience.

Furthermore, I implemented the Claims Based Dot Net 4.5 Framework, which seamlessly integrated with ADFS (Active Directory Federation Services) and ThinkTecture Server, ensuring secure and reliable claims-based authentication.

Manager Consultant
Sogeti Project at FBL Financial Group, Inc.

September 2013 – October 2013
Omaha, NE

During my tenure as a Manager Consultant at Sogeti, I focused on analyzing and optimizing the deployment process at FBL Financial Group, Inc. This involved conducting observations to understand the current Continuous Integration deployment process and identifying areas for improvement.

I also conducted investigations into the existing Software Configuration Management tools in use, evaluating their effectiveness and suitability for the organization's needs.

To gain a comprehensive understanding of the project, I interviewed key stakeholders and implementers, gathering insights and requirements to inform the optimization efforts.

Based on the gathered information, I created Deployment Process Flow and Release Checklists. These documents served as a guide to standardize and streamline the deployment process, ensuring consistency and efficiency in future deployments.

Through my contributions as a Manager Consultant, I aimed to enhance deployment practices, increase efficiency, and support the successful implementation of projects at FBL Financial Group, Inc.

Senior Software Developer - Contractor
CSS Staffing

June 2013 – August 2013
Omaha, NE

- Led the architecture and development of an MVC application using Linq-To-SQL with a Generic Repository.
- Implemented and troubleshooted enterprise applications, ensuring their smooth operation and performance.

C#.NET Developer – Contractor
Project at Securities America

November 2010 – January 2010
Omaha, NE

- Led the full life cycle development of an application using SQL Server, Ajax, ASP.NET, C#, and JQuery for the Mobile Unit.
- Implemented robust features and functionalities, ensuring a seamless user experience.

C#.NET Developer - Contractor
Project at NAUTILUS INSURANCE,

July 2010 – October 2010
Scottsdale, AZ

- Developed and maintained an enterprise Quote Tracking application using C#, ASP.NET, and SQL Server 2008.
- Designed and implemented a comprehensive Design Pattern Application for Journal Entry to PeopleSoft, catering to the needs of the entire organization.

C#.NET Developer – Contractor
CDI - Project at WELLS FARGO,

May 2010 – July 2010
Phoenix, AZ

- Developed applications through the entire life cycle using SQL Server, Ajax, ASP.NET, and C#.
- Ensured the successful completion of business requirements for a mature production application through fortification and implementation.
- Designed and implemented SQL Server databases for new applications, including the conversion from Microsoft Access.

Application Developer II
AETNA INSURANCE

April 2009 – May 2010
Phoenix, AZ

- Designed, implemented, and updated enterprise web development internet sites for the Aetna Medicare Unit.
- Updated and implemented requirement changes to intranet applications specifically for internal employees of the Aetna Medicare Unit.
- Developed and maintained SQL Server Reporting Services Reports for the intranet applications.
- Administered and developed a small Intranet site using SharePoint 2007.

C#.NET Developer – Contractor

June 2008 – April 2009

Project at NETTRYX COMPUTER SERVICES, LLC,

Litchfield Park, AZ

- Developed the Office Live SharePoint site application for CSharpprogrammer.net using ASP.NET and SQL Server 2005.
- Designed and implemented Programmable Logic Controller (PLC) programs for a Robotic System.
- Created the NetTryx.net Web Site, a web application, using C#, ASP.NET, JavaScript, T-SQL, AJAX, CSS, and XHTML.
- Programmed and developed the Mutts2Manners.com Web Site using ASP.NET, SQL Server, and XHTML.

C#.NET Developer – Contractor
Project at MDI GROUP / NAUTILUS INSURANCE,

June 2008 – October 2008
Scottsdale, AZ

- Currently designing and enhancing an enterprise-wide Policy Assignment ASP.NET application using Visual Studio 2008.
- Created and implemented SQL 2005 stored procedures and SQL functions for various enterprise applications.
- Continuously updating and maintaining existing web application software using C#, JavaScript, T-SQL, AJAX, CSS, and XHTML.

Senior Developer/IT Manager
NORCIMBUS, INC.

(Rehire)April 2003 – July 2007 & October 2007- June 2008
Phoenix, AZ

- Strategized and executed the implementation of firewall, security measures, and network infrastructure, as well as server software such as Windows 2000, Active Directory, Exchange, SQL, and Red Hat Linux, SUSE Linux Server.
- Developed and established a C# Express, ADO.Net, SQL 2005 Express database for QC Certificates.
- Designed and implemented a Gas Cabinet Simulator program using C#, SQL 2005 Express, and T-SQL.
- Created and deployed Programmable Logic Controller (PLC) programs for all product lines.
- Designed, developed, and deployed IoT, Scada, and Machine-to-Machine (M2M) connectivity solutions.

C#.NET Developer – Contractor

July 2007 – October 2007

Project at COMSYS IT Partners, Inc. / DHL Express,

Scottsdale, AZ

- Design and implement systems and software standards using C#, ADO.NET, and SQL.
- Automate tasks to enhance system availability and reduce maintenance efforts.
- Create and implement advanced product development and applications using JavaScript and VBScript.
- Develop software solutions for data exchange and transfer between SQL servers.

President/CEO/Programmer
NETTRYX COMPUTER SERVICES, LLC,

January 2000 - April 2003
Phoenix, AZ

- Successfully administered IT requirements for approximately 45 clients.
- Developed an innovative program using Visual Basic 6.0, ADO, and Microsoft Access for an Accredited University.
- Updated and organized Microsoft Access database, forms, and reports for a Jeweler client.
- Created an ASP.NET login form using C# and built a SQL connection string in ADO.NET for Nissan & Infinity.

- Designed and implemented University software using VB6, MS Access, and ADO.

Senior Developer / Information Technology Director
INNOVISION IMAGING, INC.,

February 1999 – January 2000
Phoenix, AZ

- Provided oversight and direction for LAN/WAN, system programming, and security operations.
- Managed and administered all IT requirements with direct accountability.
- Developed a C program that parsed multiple OCR text files into a single combined file.
- Designed a program for Medical Record Retention using Microsoft Access, Visual Basic 6.0, and ADO.

AZTECH PROFESSIONAL SERVICES, INC.,
Developer / Network Systems Engineer

February 1998 – February 1999
Phoenix, AZ

- Designed a SQL Database and created tables, queries, and reports.
- Developed and administered LAN/WAN, performed server maintenance, and installed programs.
- Interacted with clients to coordinate planned deliveries and effectively implemented the action plan.

Senior Developer / Information Technology Director
KENNEY AERIAL MAPPING, INC.

January 1997- February 1998
Phoenix, AZ

- Developed a Visual Basic program that generated Engineering projects for new AutoCAD jobs.
- Oversaw network infrastructure, projects, security, and maintenance for Windows NT Servers, Novell Servers, Sun Solaris Servers, and Windows NT workstations.
- Designed and implemented a new network for the branch office in Las Vegas, specifically for AutoCAD Engineers.

Jr. Developer / Information Technology Consultant
PRONET, INC

May 1996-January 1997
Phoenix, AZ

- Provided consulting services and support for corporate clients in the area of IT
- Installed and Created databases in Microsoft SQL 7.0 for client.

Crew leader
WELLS BLUE BUNNY DAIRY,

June 1987-May1996
LeMars, IA

- Managed and directed crew of 25+ to develop quality Ice Cream Products for the world's largest dairy.
- Operated some of the largest manufacturing machines in the company.

Technical Skills

Skills	Years' Experience	Expertise Level
IoT / Robotics	20yrs +	Advanced
C / C++ / C#	20yrs +	Advanced
API's / SDK	20yrs +	Advanced
PLC's / Scada / IIoT	20yrs +	Advanced
Manufacturing / Industrial Services	15yrs +	Advanced
WCF/ Web / REST SERVICES	10yrs +	Advanced
MQTT / AMQP / Modbus	20yrs +	Advanced
R / Python	5yrs +	Intermediate
Docker	5yrs +	Intermediate
VB.NET	20yrs +	Advanced
ADO.NET/ ORM / Entity Framework Core	20yrs +	Advanced
SQL Server	20yrs +	Advanced
SSRS, SSIS, SSAS	7yrs +	Advanced
Visual Studio	15yrs +	Advanced
Java-Script/AJAX	15yrs +	Advanced
MVC4/MVC5/MVC Core	5yrs +	Advanced

Technical Applications

Software systems and applications that are relevant and recent:

Technical Sales, Technical Leadership, Nvidia, Raspberry Pi, Arduino, Amazon Web Services, IoT Edge, Robotics, Cloud Technologies, .Net Core, Linux / Ubuntu, ROS / ROS2, MQTT, Identity Server, OData, R, Golang, C / C++ / C#, Allen-Bradley PLC Controllers, Rockwell Software for Allen-Bradley Controllers, Direct Soft 32, Direct Logic PLC Controllers, Rust, aurelia.io, Angular, io.js, express.js, MongoDB, CI/CD, SharePoint, HTML5, SSIS, SSRS, SSAS, Windows 2008 Server, Window 2003 Server, Windows Server and Professional, Microsoft Office, Active Directory, XAML, WF, WCF, Silverlight, SQL Server Integration Services, SQL Server Reporting Services, Microsoft Exchange, ASP Net MVC, ASP Net Ajax, Microsoft SQL Database, Visual Basic.Net, ADO and ADO.NET, ODBC, Web Services, Win32 API, Visual Studio.Net, JavaScript, VBScript, XML, Stored Procedures, SQL Views, Microsoft Office, Software Development Life Cycle (SDLC), Red Hat Linux 7.3 –9.0, SUSE Linux 10.0, Samba Server, Send Mail Email Server, Bind, Cisco Pix Firewall, VPN through VMware, Cisco, VPN through SSH and SSL, ASP.Net, IIS 5.0-6.0, Microsoft SQL 2000 & SQL 2005, Visual Studio 2008, Regular Expressions, ASP, HTML & HTA, CSS, VMware Server & Workstation, Java, Windows 2008 Server, Vista, Cascading Style Sheets, SQL Reporting Services, Team Foundation Server, Clear Case Source Control, Android, Team Foundation Server, Visual Studio 2010, Jasper Reports, Eclipse, .Net Framework, ASP.net MVC, jQuery UI, Bootstrap3, CSS, .NET Programming - ASP 5.0, .NET Programming - C# 5.0, JavaScript, SQL Server

Selected Achievements:

Established, created, and implemented a robotics professional services department to deploy AWS solutions for customers in the field of industrial robotics, including IoT RoboRunner, RoboMaker, Robotics Accelerators, and IoT/IIoT technologies.

RESULT: Successfully attracted new customers, including AGCO Inc., and expanded the customer base among enterprise clients by leveraging AWS cloud architecture and services.

Evangelized, prototyped, and developed an autonomous Ideal Harvest tractor equipped with safety controls and sensors, showcasing the potential of robotics in the agricultural sector.

RESULT: Demonstrated the value of automation and safety improvements, leading to increased customer interest and adoption.

Architected and implemented a web application solution to effectively manage and control all Valmont Irrigation devices on the farm.

RESULT: Significantly reduced stress and traffic for customers, while also enhancing overall functionality. The solution brought a remarkable improvement in data reporting and management capabilities.

Implemented and designed new SharePoint Collaboration site for NetTryx LLC in Office365 to improve cloud computing and SharePoint knowledge and training from SetFocus Master's Program.

RESULT: Increase traffic and improve knowledge utilizing experience and training from Information Technology Master's Program from SetFocus.

Engineered software solutions to clients to allow for the communication and development of their applications. Helped to improve customers satisfaction and bottom line by automating tasks to develop quick effective solutions for customers worldwide.

RESULT: Helped to establish and maintain superior customer support to improve DHL's bottom line annually.

Designed a complete flow chart model completely documenting the program in Visio 2000. Created the new program for the Automatic Gas Blending Cabinet. Customized a strict low level Proportional-Integral-Derivative control process, to blend bulk gases to a customer chosen percentage. Cost of one cylinder is \$2,500.00 which will be used in a 24-hour shift.

RESULT: Created Automatic Blending System, which produces an average savings of \$100,000 annually.

Recognized Gas Cabinet product line software needed updated to a new technology. Calculated costs were about \$40,000 per gas cabinet. Developed new product line by programming new software with cost savings of \$20,000 per cabinet engineered with new Allen-Bradley controller.

RESULT: Signed a \$3 million dollar contract with the largest Fab in the world to produce cabinets for 3 years.

Evaluated a need for technology help on information systems for small business clients in the valley. Researched about 20 clients that need consulting services costing \$75 dollar per hour. Created a company producing independent contracting consultants for a fee of \$75 per hour.

RESULT: Established a technology company that grossed approximately ½ million dollars the 2nd year in business.

Uncovered organizational challenge with university on tracking students. Expanded personnel and volunteers were needed to help shuffle papers around and organize student information. Programmed a Visual Basic and SQL program that tracked students from prospect to graduation.

RESULT: Saved \$400 thousand dollars on personnel and projected programs.

Researched large insurance company with millions of papers and file cabinets and no more space. Designed program that parsed information from Btrieve database to new SQL Database. Forecasted cost of about 1 to 1.5 million annually. Evaluated and recommended a Document imaging system to manage workflow and document control.

RESULT: Forecasted plans of 2 million dollars in printing and storage costs.

Discovered important medical records being lost or not copied in time. Designed program in Microsoft Access Database with a Visual Basic front-end. Projected cost in the thousands for the patient, doctor, and insurance company. Pioneered initial version of program design in Visio 7.0 that kept information on internet readily available to all.

RESULT: Achieved savings and possibly lives with implementation of program.
