

I am writing to express my interest in opportunities where I can contribute my extensive experience in software engineering, IoT, and automation. With over 20 years of experience in information technology, I have built, led, and delivered innovative software and hardware-integrated solutions across multiple industries, including semiconductor, agriculture, and defense.

Throughout my career, I have successfully created and developed new product lines by leveraging strong problem-solving, troubleshooting, and implementation skills. My background spans both software and hardware engineering, enabling me to design and deploy hybrid IoT and M2M solutions that integrate seamlessly from device to cloud.

From a software development perspective, I bring deep expertise in .NET and .NET Core, C#, ASP.NET MVC, MVC5, SQL Server, HTML5, RESTful APIs, OAuth2, OpenID Connect, and IdentityServer. I have also worked extensively with JavaScript, Angular, Node-RED, jQuery, WCF, Web Services, and Azure-based architectures. My experience includes building scalable web applications, secure authentication systems, and distributed device management platforms using LTE and GPRS technologies with REST and Socket.IO.

On the hardware and industrial automation side, I have designed and implemented high-purity gas delivery systems for the semiconductor industry, serving global organizations such as BOC Gases, Intel, Motorola, and Cree. I have developed monitoring, control, and tracking systems for equipment deployed worldwide, working with technologies including Allen-Bradley, Siemens, Red Lion Controls, and Linux-based systems.

Beyond technical execution, I have long served as a technology advocate and collaborator, working with cross-functional and international teams to engineer and deliver innovative products. I am passionate about robotics, the Internet of Things, and secure identity infrastructure, and I remain committed to continuous learning and professional growth.

I earned my Master's degree from SetFocus in October 2011, where I worked extensively with .NET 4.0, Silverlight, and SharePoint 2010. My academic foundation, combined with decades of hands-on experience, enables me to deliver practical, production-ready solutions aligned with business objectives.

I am confident that my dedication, breadth of experience, and commitment to excellence would make a meaningful contribution to your organization. I welcome the opportunity to discuss how my background aligns with your team's needs.

Sincerely,

Allan F. Gagnon
