

Allan F. Gagnon – Professional Experience Summary

I am a Software and Hardware Engineer with over 20 years of experience in Information Technology, specializing in IoT, robotics, enterprise software, and industrial automation. Throughout my career, I have designed, developed, and delivered innovative product lines across diverse industries by applying strong problem-solving, troubleshooting, and implementation expertise. My commitment to continuous learning, technical excellence, and team development has consistently enabled organizations to achieve sustainable growth and technical advancement.

Leadership & Technical Experience

Amazon Web Services (AWS) – IoT Specialist & Robotics Architect

At AWS, I played a key role in designing and architecting highly complex, integrated IoT and robotics ecosystems connecting thousands of internet-enabled devices to scalable cloud platforms. I collaborated with industry leaders to conceptualize, develop, and deploy enterprise-grade IoT and robotics solutions that enhanced operational efficiency and delivered measurable business impact.

Through this work, I gained extensive expertise in enterprise architecture, large-scale system integration, and cloud-native deployments. I further strengthened my capabilities in cloud computing, mobile technologies, analytics, artificial intelligence, and cybersecurity—core pillars of modern IoT and robotics systems.

Valmont Industries – Software Manager

As Software Manager, I led a cross-functional team of over 40 onshore and offshore developers, project managers, and technical contributors. I was responsible for the architecture, development, and delivery of the company's flagship platform, BaseStation3.

This role required not only technical oversight but also strategic leadership—mentoring team members, fostering professional growth, and cultivating a high-performance culture focused on quality, scalability, and innovation.

Sogeti – Lead Consultant (Farm Credit Services)

While consulting at Farm Credit Services, I was asked to lead the recovery and completion of a critical application after challenges with a third-party vendor. I assembled and directed a development team to stabilize, redesign, and successfully deliver the solution.

In addition, I architected and implemented a CI/CD pipeline to automate build, testing, and release processes, significantly improving deployment reliability and development efficiency.

Sogeti – Lead Software Developer (Berkley Technology Services)

Following the Farm Credit engagement, I was selected to lead development of a nationwide Single Sign-On (SSO) platform for Berkley Technology Services. I designed and implemented a Thinkecture IdentityServer solution integrated with Active Directory using WS-Federation and ADFS as the identity provider.

This enterprise authentication platform supported secure access across the United States and strengthened organizational identity and access management capabilities.

Wells Fargo – Development Team Lead

At Wells Fargo, I served as Team Lead for a web portal initiative, overseeing both internal developers and consultants. I established structured development processes and best practices while mentoring team members to grow their technical expertise and decision-making autonomy. My focus was to create a balanced environment of guidance, accountability, and professional development.

Norcimbus – Engineering Manager

As Engineering Manager at Norcimbus, I led the design and global deployment of High Purity Gas Delivery Systems for the semiconductor industry. This role provided international exposure and the opportunity to manage multidisciplinary engineering initiatives. I worked closely with global clients to deliver complex industrial systems that required precision, safety, and reliability.

Leadership Philosophy & Impact

Across all roles, I have had the privilege of designing, developing, and leading highly talented teams to deliver enterprise-wide, full lifecycle software and hardware solutions. Many of the systems and product lines I helped create continue to serve as foundational technologies that drive operational performance and revenue growth today. I take pride in mentoring and empowering teams—helping individuals grow professionally while delivering innovative, scalable, and mission-critical solutions. My career reflects a consistent focus on combining technical excellence with strong leadership to build systems that create lasting value for organizations worldwide.
